PROFESSIONAL SUMMARY

UI/UX and Product Designer with 4+ years of experience designing web and mobile products, specializing in **complex, multi-module enterprise ERP systems**. Currently at LINRCO, designing an integrated ERP platform of 10+ modules, together with client and candidate portals connected to it and a dedicated **mobile app for the company's employees**. Skilled at turning BRDs and user stories into clear user flows, high-fidelity UI and interactive prototypes, and at building design systems that keep large products consistent. Front-end knowledge (HTML, CSS, JavaScript) allows me to build realistic coded prototypes and hand off designs developers can implement accurately.

CORE SKILLS

UX & Product: User flows, information architecture, complex workflow & approval-flow design, user research, usability testing

UI & Systems: High-fidelity UI, design systems & component libraries, light & dark themes, dashboards & data-heavy interfaces, responsive web & mobile, interaction design

Collaboration: BRD & user story analysis, screen inventories & field specs, stakeholder presentations, developer handoff

Tools: Figma, FigJam, Figma Make, Adobe XD, HTML5, CSS3, JavaScript, Microsoft Office

WORK EXPERIENCE

LINRCO | Cairo, Egypt — **Apr 2025 – Present**

UI/UX Designer

- Design a large-scale **ERP platform of 10+ interconnected modules** in both light and dark modes, where data and workflows are shared across the whole system.
- Designed a **complete business module end to end** from a BRD of 50+ user stories, covering the full record lifecycle (creation, additions, corrections, cancellations) with multi-level approval routing, installment tracking and exception scenarios.
- Designed a **contract management module** serving two business entities, including a guided 3-step company onboarding flow with conditional logic, upload states and validation.
- Designed **client and candidate portals** integrated with the ERP, plus a government-services portal with a five-stage approval tracker.
- Designed a dedicated **employee mobile application** giving the company's employees mobile access to ERP services, including its onboarding experience.
- Built and maintain a **unified design system** (colors, components, light and dark themes, reusable patterns such as status pipelines and faceted search) applied across all modules.
- Translate BRDs and user stories into screen inventories, field-level specifications, user flows and interactive coded prototypes used to validate flows with business analysts and stakeholders before development.
- Hand off **developer-ready designs** with specs, assets and states for every screen, and support developers through implementation until release.
- Work closely with business analysts, developers and management; also contributed to the company website redesign and an annual UI/UX report covering ten ERP modules.

Tawasol Map | Riyadh, KSA (Remote) — **Jul 2024 – Apr 2025**

UI/UX Designer

- Designed an **ERP-style retail management system** for a large supermarket, covering inventory, stock control and accounting, across a web platform and a mobile app.
- Designed data-heavy screens for products, stock movements and accounting records, keeping dense information clear and easy to act on.
- Ran usability tests to refine navigation paths and interaction patterns.
- Built a design system and style guide to keep the web and mobile experiences consistent.

- Worked remotely with a Saudi-based team, presenting design solutions to stakeholders and supporting developers through implementation.

Computer Engine **Jan 2023 – Jul 2024**
Product Designer

- Designed the **Alfa Cure healthcare suite** from early concept to delivery: **Alfa Doctor** for doctors and **Alfa Patient** for patients, across web, mobile and tablet.
- Designed structured patient-history views and forms in Alfa Doctor that let doctors review each patient's medical history quickly and clearly.
- Designed both sides of the doctor–patient experience so the two apps stay consistent and connected.
- Shaped interfaces around doctors' daily workflows, keeping medical information clear and quick to act on.
- Turned concepts into functional prototypes and worked with engineers to align designs with technical constraints.
- Refined the product based on customer feedback and competitor analysis.

UXArrow | Qatar (Remote) **Jul 2022 – Jan 2023**
UI/UX Designer

- Designed user-facing digital services for a **major Qatari energy company**, from design concepts to functional prototypes.
- Delivered detailed prototypes and documentation to reduce development rework.
- Coordinated with designers and product engineers to keep the design phase efficient and aligned with client expectations.

Freelance **Dec 2021 – Present**
UI/UX Designer

- Designed an animated **website for ASAS Engineering & Construction**, a construction firm in Egypt, with a bold hero, services, projects and quote requests.
- Designed **Go Play**, a sports app for organizing amateur football and tennis leagues and tournaments, with player profiles, results, fixtures and standings.
- Designed role-based experiences for 8 user types: tournament organizers, academies, players, trainers, parents, referees, live match-event recorders and the audience.
- Deliver website and mobile app designs for a software-house partner and their clients, from wireframes to final UI, specs and assets.
- Iterate on designs based on client feedback and support developers through implementation.
- Expanded into front-end development (HTML5, CSS3, JavaScript, Node.js) to bridge design and code.

EDUCATION & TRAINING

Bachelor of Arts, History — Ain Shams University, Cairo
Advanced User Experience Design Nanodegree — Udacity
English Language & Conversation Program — AMIDEAST, Giza
